DOUBLE-HORN NEUTRINO PRODUCTION

WITH A TEST TARGET

H. B. White, Jr.

May 11, 1976

During the run of Experiment #53A, the standard target configuration failed. A substitute Al_2O_3 target was placed one (1) foot upstream of the standard target position. This note presents a comparison of the Neutrino Flux distribution for the test target position and the standard target position with double horns.

A table is presented for the target test data, as well as a graph of the π^+ , K^+ and sum (π^+ and K^+) distributions. An additional figure is presented comparing the test target data with the standard target position.

For distribution of present Fermilab Neutrino Systems, refer to FN-292.
